

a

Three-stage empirical evidence chain

b

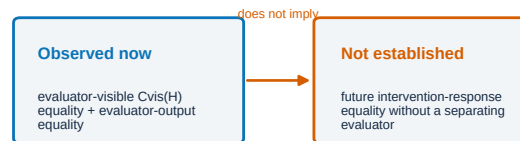

Post-hoc structure-estimand counterexample

response rule	DN acc.	UF acc.	contrast
perfect arm-specific recovery	1	1	0
arm-blind constant-true	1	0	+1

Same DN/UF truth assignment; the derived contrast is not monotone in structural fidelity.

c

Identification architecture and field implication

Field implication

Memory, self-evolving agents and AI scientists require interventions and evaluators that separate candidate response laws; current-content/output equality alone is insufficient.

Identification principle; not evidence that true response laws differed.
