

a A specified present readout is not sufficient

Same specified present readout

r is matched, while complete state, target and required correction differ

One readout-only action g cannot close both targets

Compact retention of (r, u) restores sufficiency

b Two recorded entry points into common practice

Recorded coefficient continuation

formation $\rightarrow$ feedback revision $\rightarrow$ inherited reuse

Fig. 3

Recorded proof application

shared declarations $\rightarrow$ generated premise $\rightarrow$ supplied consumer

Fig. 4

Humans, AI, feedback and adoption remain inside the research object

Evidence identities remain separate: theorem, successor records and Lean proof record are not one identified causal loop
